

SDM-Elektro becomes IEM Power Systems dealer

IEM Power Systems produces Rotabloc UPS systems and is a major manufacturer of electrical distribution and power quality equipment. IEM has facilities in the U.S. and Europe and operates worldwide.

SDM-Elektro is an international specialist for Power Quality. Our team of specialists has proven industry expertise at improving operations by optimizing the power quality within the electrical infrastructure of your facility. SDM-Elektro developed specific devices and works with state-of-the-art suppliers to fit these requirements.

Recently SDM-Elektro became IEM Power Systems dealer in Belgium. Both companies share the same mission and vision. They understand the demand for high efficient and reliable power systems such as the IEM Rotabloc rotary UPS system which is an energy storage unit that stores electrical energy in a flywheel. Rotabloc consists of a standard synchronous generator and a simple steel flywheel. The Rotabloc storage unit is very robust. The IEM Rotabloc UPS system is very efficient and effective. It is an excellent solution for customers that already own diesel generator sets. Rotabloc provides voltage stabilization, power conditioning and protection against short outage. The existing diesel generator provides the long-term power backup.

Rotabloc is also beneficial for applications that need protection against short interruptions only.
